**FOR IMMEDIATE RELEASE**

**Icomera connects live CCTV trials on London buses**

*Moovbox cellular gateway technology allows live video transmission from vehicles to CCTV control centre*

**Gothenburg, Sweden (November 12<sup>th</sup> 2008)** – Icomera AB, the world’s leading provider of cellular broadband gateways, has announced that its Moovbox technology has been selected to provide real-time communications for a major trial of live CCTV on London buses to improve public safety. 21<sup>st</sup> Century CCTV, a division of TG21 plc, has equipped twenty-one double-decker buses in North London with the technology, which allows live images to be transmitted to a central control centre shared by officers from TfL and the Metropolitan Police’s Transport Operational Command Unit. The six-month trial on behalf of Transport for London (TfL) will monitor and analyse the use of the technology to decide whether it can help deal with incidents on buses more effectively.

The LIVEview system installed on each bus comprises a ProGuard digital video recorder (DVR) developed by 21<sup>st</sup> Century CCTV, connected to a Moovbox M200 Mobile Broadband Gateway from Icomera. Cameras fitted inside and outside the bus record images continuously to disk but the new Moovbox technology means the driver can activate a high-speed link whereby operators can view live or recorded footage in real time. The TfL deployment is the first stage of a major initiative by 21<sup>st</sup> Century CCTV and Icomera to offer live mobile video streaming technology to municipalities and transport operators for public safety applications.

“Transmitting CCTV streams is a bandwidth-intensive task,” said Ola Sjölin, Icomera CEO. “Our mobile gateways employ patented switching and load balancing technology that leverages multiple cellular backhaul links to provide the fastest possible connection for public safety applications such as this. Our relationship with 21<sup>st</sup> Century CCTV brings together two market leaders to create a best-of-breed solution ideally suited to intensive, mission-critical applications such as that Transport for London is trialing.”

“We chose the Icomera Moovbox M200 gateway for this project after careful evaluation,” said David Dent, Managing Director of 21<sup>st</sup> Century CCTV. “The Moovbox has a proven track record of successful deployments with some of the world’s largest transport operators, many of whom also use our ProGuard DVR technology for in-vehicle security. We are delighted to be launching an initiative with Icomera to bring this joint solution to market, and look forward to the opportunities we expect will arise following the announcement of the TfL trials.”

The LIVEview system is available through 21<sup>st</sup> Century CCTV and selected channel partners worldwide.

**About Icomera AB**

Established in 1999, Icomera is the world’s leading provider of cellular broadband gateways delivering Internet connectivity for passenger transport, public safety and enterprise applications. Icomera technology bridges wide-area cellular networks such as 3G/HSPA and WiMAX with local Wi-Fi and Ethernet access. Icomera’s award-winning Moovbox devices are deployed on rail, road and sea serving millions of Wi-Fi connections for passenger Internet access, while providing real-time high-speed connectivity for fleet tracking and mission critical on-board systems. Icomera is headquartered in Sweden with offices in the United Kingdom, and channel partners worldwide. For more information visit <http://www.icomera.com>.

**About 21<sup>st</sup> Century CCTV**

21st Century is part of TG21 plc, an AIM listed company. The Company is focused on the integration and resale of vehicle technology systems including CCTV and fleet management, the distribution of in-vehicle entertainment and security products and insurance replacement products. The Company has a nationwide field force of vehicle electrical engineers, call centre and distribution facilities.
